

## SSR-WS Packer

The SSR-WS Retrievable Whipstock Packer combines the features of a retrievable packer with those of a high-pressure, permanent packer. Its heavy-duty design and premium manufacturing materials make it dependable under the most demanding conditions in casing sidetracks. It is ideal for use in multilateral wells or in casing sidetracks where a main wellbore re-entry is required. Its simple design allows for the tool to be easily retrieved by utilizing the SSR Retrieving Tool.

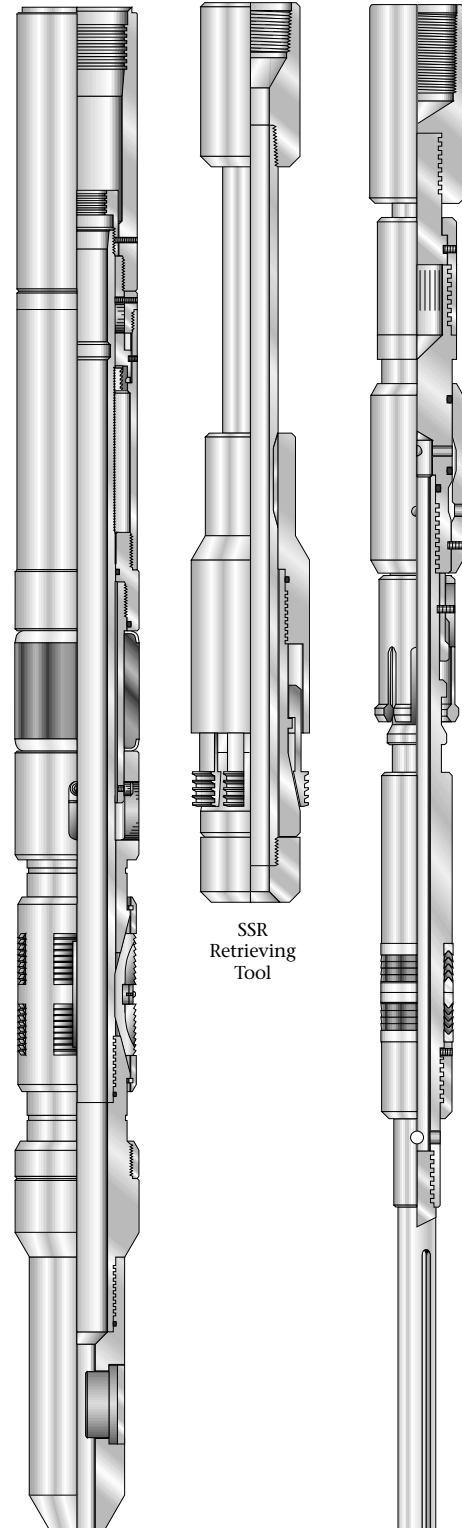

### SSR Retrieving Tool

The TIW SSR Retrieving Tool is designed to retrieve the SSR-WS Packer by running in on tubing and latching into the retrieving sleeve of the packer. The packer is easily retrieved by stinging in, applying overpull, jarring down and picking up.

### SSR-WS Orientation Stinger with Releasable Latch

The SSR-WS Orientation Stinger with Releasable Latch includes all the same benefits as the SS-WS Anchor Assembly, yet it is retrievable. As with the case of the permanent anchor assembly, the biased-edge muleshoe on the bottom of the stinger engages with the alignment lug in the packer. Instead of a positive latch, the SSR-WS Stinger incorporates a collet latch that attaches into the packer barrel.

Retrieving the anchor assembly is easily accomplished by straight pick-up which shears the releasing pins, allowing the anchor to be retrieved without disturbing the packer.
